

React.js Documentation (Basic Guide)

1. What is React?

React is a JavaScript library for building user interfaces, especially single-page applications.

2. Key Concepts

• Components: Building blocks of UI • JSX: Syntax extension for JavaScript • State: Data managed within components • Props: Inputs passed to components

3. Example Component

```
function App() { return Hello World; }
```

4. Lifecycle

React components have lifecycle methods such as mounting, updating, and unmounting.

5. Conclusion

React is widely used for building scalable and interactive web applications.
